

Personalised online software training for PQ Systems' products

Do you need a better understanding of CHARRunner, SQCPack, or GAGEpack?

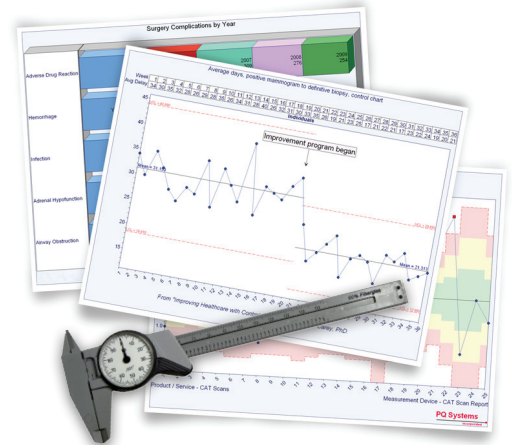

Quickly come to grips with what you need to know in a session that can be specifically designed for you, or choose from one of our popular modules.

Each session is presented by one of our technical experts in a practical manner.

What about a Q & A session?

Questions about functionality? Technical issues? For example:

- How do I customise my control charts?
- How can I add my company's logo to my charts?
- How can I produce a summary report of process capability to send to my customer?
- How do I add a picture of a gauge to my gauge database?
- How do I automate my monthly reports?
- How do I automatically insert charts into a PowerPoint presentation?
- How do I track my external calibrations?

Ask *all* your questions and we'll provide the answers together with a practical demonstration.

Choose a time to suit your schedule

A webinar can be scheduled in convenient one-hour modules for a time that fits with your daily work flow. Tell us what you want, or choose one of our modules. The modules are designed to provide maximum learning opportunities in a time-efficient manner.

Cost effective – train one or many in the same session for \$195 plus GST

The webinar format allows for multiple participants to experience the training for one low price.

Call today to arrange your first session – (03) 9770 1960

Let us tailor a session specifically to meet your needs at a time convenient to you.

Training topics

SQCpack—control charts

Setup, configuration, and getting started
Entering data, setting up groups
Choosing charts for variables and attributes data
Creating and modifying control charts
Interpreting control charts

SQCpack—histograms and capability

Creating and modifying histograms
Testing for normality
Capability analysis
Multi-charts

SQCpack—additional charts

Pareto diagrams
Charts for short runs
Box and Whisker charts
Reports

SQCpack—advanced features

Customising charts
Coloured sigma zones
Calculating control limits
Filtering data
Sorting by various parameters, e.g., shift, operator, machine
Calculated characteristics
Real-time charting
Adding annotations to charts
Sharing charts by e-mail, intranet, etc.
Using a Workspace to automate reporting etc.

GAGEpack—gauge management

Installation and getting started
Adding a gauge
Standard reports
Management reports

GAGEpack—calibrations and maintenance

Completing calibrations
Setting up maintenance events

GAGEpack—measurement systems analysis Part 1

Setting up a measurement study
Data entry for MSA
Charts for MSA

GAGEpack—measurement systems analysis Part 2

Repeatability
Reproducibility
R&R
Linearity
Stability

CHARrunner—control charts

Setup, configuration, and getting started
The chart definition form
Creating and modifying control charts
Interpreting control charts
Displaying the date on a chart

CHARrunner—histograms and capability

Creating and modifying histograms
Testing for normality
Capability analysis
Multicharts

CHARrunner—advanced features

Calculating control limits
Assigning special causes
Filtering data
Annotations
Coloured sigma zones
Sharing charts by e-mail, intranet, etc.
Using a Workspace to automate reporting etc.

CHARrunner—additional charts

Charts for attributes data
3-way charts
Attributes charts for data that is 'overly dispersed'
Pareto diagrams
Scatter diagrams
Charts for rare events
Box and Whisker charts
Dashboards

Customise a module to suit your needs

Tailor a session to address your specific needs. Ask all your questions and get answers from one of our technical experts, with practical demonstrations.

These one-hour sessions are a cost effective way to train your team. Train one or many in the same session for just \$195 plus GST per session.

The webinar format allows for multiple participants to experience the training for one low price.

\$195 plus GST per session
